

Gulf States Clean Guard has been killing viruses, germs, bacteria and mold since we were established in 2006.

GSCG applies the hospital grade disinfectant Vital Oxide through fogging machines, which creates a super fine mist that is able to come in contact with hard to reach surfaces inside a facility, church, business or home.

Vital Oxide has been approved by the EPA and CDC (attached links below) to be used against the Novel Corona Virus. This product and application method is safe to use on hard surfaces (tables, desks, flooring, etc.) Along with soft surfaces: (carpet, upholstery, linen, etc.).
